

Statement

Bugmaster® Flowable Insecticide - Use on lychees during flowering

Recommendation issued by Bayer CropScience Pty Ltd

Hawthorn East, 7 September, 2007

The Bayer CropScience product Bugmaster Flowable Insecticide is registered in Queensland and Western Australia for the control of a variety of insect pests when applied as a spray in lychees.

Following observations last season, Bayer CropScience is currently considering the suitability of Bugmaster for use in lychee crops during flowering.

Until such time as further information is available **Bayer CropScience recommends that Bugmaster should not be applied to lychee crops during flowering.**
